## BASIC-ABSTRACT:

NOVELTY - A database stores data of goods and services desired by network users. The request for proposals (RFPs) (30) is transmitted to a central network processing unit (CNP) which then transmits RFP notices. The seller/bidder (22) receives the notice and submits an encrypted bid (34) to the CNPU which allows the requesters to view all bids along with a bidder's optional profile to develop a knowledge-based selection of preferred bidder.

USE - For insurance companies, private boat owners, private and commercial waterfront owners, marinas, municipal beach and lake restoration, vessel manufacturers, boatyards and shipyards, marine repair facilities, engine and equipment dealers, boat trailer manufacturers, boat towing and transporting companies, dredging companies, dock and sea wall companies and beach restoration companies.

ADVANTAGE - Provides automated e-mail start and finish notification to the buyer/requester notifying the best candidate of its selection and the losing bidder notifications. By providing the central network processing unit, the solicitation of bids for the procurement of goods and services is efficiently realized.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of the online RFP procurement auction system.

Seller/bidder 22

Request for proposals 30

Encrypted bid 34

ABSTRACTED-PUB-NO: WO 200275597A

## BASIC-ABSTRACT:

NOVELTY - In a network system, several sites (101-105) may collaborate in a product development and selected sites may be the source of product content. At each potential source site, a generic schema is generated for exchanging the different types of data packages between remotely located sites. When a site to site transfer is required data is converted on-the-fly from its original schema to the generic schema, transferred and converted in the receiver to the its schema.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for a data network for generating a virtual unified product content repository consisting of a plurality of different databases.

USE - For use in data processing systems, particularly for providing collaborative-commerce (C-commerce) and engineering platforms for Product Content Repositories (PCR).

ADVANTAGE - The use of generic schema allows a seamless collaboration between engineering/designing departments and between engineering and manufacturing departments. Reliability is provided by eliminating single points of failure in the enterprise wide data repository. Data integrity is provided by maintaining completeness and accuracy of the product information and productivity is improved by provision of rapid access to data round the clock. Engineering and manufacturing resources can be balanced along with network loads. The method offers essentially unlimited scalability. The enhanced functionality of conventional exchange engines offers better support for intensive engineering data Request For Proposals (RFPs), bi-directional product content/data integration between buyer's and bidder's back end and enterprise resource planning systems, support for intensive engineering data RFPs and dissolves the boundary between procurement and fulfilment into a seamless C-commerce process.

DESCRIPTION OF DRAWING(S) - The figure schematically illustrates the general layout and functioning of an engineering collaboration system.

Engineering collaboration system sites. 101-105
